Information on toxicological effects

Symptoms

Signs of toxicity in laboratory animals given sulfentrazone included clonic convulsions, ataxia, hypersensitivity to touch, chromorhinorrhea, abdominogenital staining, decreased locomotion, lacrimation, nasal discharge, and squinting eyes. Acute poisoning from ingestion of large quantities of liquid imidazolinone herbicide has resulted in hypotension, pulmonary dysfunction, oral mucosal and gastrointestinal irritation, leukocytosis, metabolic acidosis, and transient liver and renal dysfunction. Imidazolinone herbicides are CNS depressants, causing impaired consciousness and coma in some cases. Nausea and intense vomiting shortly following ingestion is common, and diarrhea may occur. Severe symptoms have included impairment of consciousness and respiratory distress requiring intubation. Decreased blood pressure may occur following excessive doses. Mucous membranes may become ulcerated following ingestions or splashes due to the corrosive action of imidazolinone. Aspiration pneumonitis is a common clinical occurrence following ingestions.
Delayed and immediate effects as well as chronic effects from short and long-term exposure

**Chronic toxicity**
Sulfentrazone: Prolonged exposure cause decreased hemoglobin content and hematocrit, and increased spleen weight and splenic extramedullary hematopoiesis at high doses in animal studies.

**Mutagenicity**
Sulfentrazone, Imazethapyr: Not genotoxic in laboratory studies.

**Carcinogenicity**
Sulfentrazone, Imazethapyr: No evidence of carcinogenicity from animal studies.

**Neurological effects**
Sulfentrazone: Clinical signs of neurotoxicity in laboratory animals was observed at high dose levels

**Reproductive toxicity**
Sulfentrazone, Imazethapyr: No toxicity to reproduction in animal studies.

**Developmental toxicity**
Sulfentrazone: Fetal weight decreased; delayed skeletal ossification observed at maternally non-toxic doses are reversible effects and a dose-response is established; malformations observed in fetuses at maternally toxic doses and consistent with the mode of action for protoporphyrongen oxidase inhibitors. Developmental toxicity testing and results were generated for sulfentrazone with toluene present as an impurity.

**Imazethapyr: Not teratogenic in animal studies.**

**STOT - single exposure**
Not classified.

**STOT - repeated exposure**
May cause damage to organs through prolonged or repeated exposure.

**Target organ effects**
Sulfentrazone: Hematopoietic system.

**Neurological effects**
Sulfentrazone: Clinical signs of neurotoxicity in laboratory animals was observed at high dose levels

**Aspiration hazard**
No information available.
